

Hotel / Conference Suite

This layout would suit a small hotel with conference room. A four zone mixer amp accommodates a paging microphone, MP3 player, TV audio input and a remote input wall plate in the conference room,

Ceiling speakers are used throughout with separate zones set up for the communal areas, restaurant & bar area, conference room and back of house staff area. Use of a remote level control wall plate enables the rest of the equipment to be housed securely to reduce the chance of tampering with settings.
